SUMMARY

Operations professional moving into data and business analysis. I coordinate dispatch and delivery at a supply chain company, where I track KPIs, investigate exceptions and turn operational records into clear status reports. Independent analytics projects cover £10.7M in retail revenue, retention for 4,999 subscribers and ROI across 41,188 marketing contacts, each ending in business recommendations.

SKILLS

Data: Excel, Google Sheets, Python, pandas, Matplotlib, SQL (SQLite), Power BI (in progress), data cleaning, KPI tracking, trend analysis, cohort and RFM segmentation, dashboard reporting

Operations: Dispatch coordination, scheduling, routing, load coordination, exception handling, root-cause analysis, process improvement

Business: Stakeholder communication, documentation, decision support, cross-functional collaboration, Agile project management

EXPERIENCE

Operations Coordinator and Dispatcher

Nov 2025 – Present

Mosaic Supply Chain, San Jose, CA

- Analyze dispatch, routing and delivery data to spot delays, recurring issues, workload trends and process-improvement opportunities.
- Monitor delivery status, route progress, service exceptions, turnaround time and volume as core performance indicators.
- Maintain operational records and reports in Excel and Google Sheets that support daily decisions and keep data accurate.
- Investigate service exceptions and data discrepancies, find root causes and drive timely corrective action.
- Coordinate schedules, routes, assignments and real-time updates across drivers, customers and internal teams.
- Write concise status summaries for stakeholders and improve tracking workflows to raise visibility and cut repeat issues.

DATA ANALYTICS PROJECTS

Online Retail Revenue Analysis

Python, pandas, Matplotlib

- Cleaned 541,909 transaction records and analyzed £10.7M in revenue across 19,960 orders by season, product, country and customer group.
- Built RFM customer segments showing the top 434 customers drive 52% of identified-customer revenue; recommended earlier Q4 planning and targeted retention.

Subscription Cohort Retention Analysis

Python, pandas, cohort analysis

- Built monthly cohorts from 51,333 transactions for 4,999 subscribers: 62.4% retained at month 6 and 49.2% at month 12.
- Found auto-renew customers retained 42.7 points higher at month 6; recommended onboarding and auto-renew experiments.

Marketing Campaign ROI Analysis

Python, pandas, funnel analysis

- Mapped the conversion funnel for 41,188 contacts (11.3% conversion) and compared channel economics: cellular converted 14.7% vs 5.2% by telephone.
- Modeled channel ROI under stated cost assumptions and recommended a test budget shift toward cellular and high-response segments.
